- Checks and Saves
- Roles
- Minigames

INTRODUCTION

This section describes the very basics of how to play Yabec, as well as its design philosophy. The following sections will describe game procedures for a variety of situations.

1. ROLEPLAY

In Yabec, you play as an adventurer in a fantasy world. You may play a premade character, or make one yourself. This is your avatar, and the way you interact with the game world.

1. PARTY

Your character will team up with other players' characters (PCs) and adventure. Your primary goal is to gain wealth and power.

2. THE DUNGEON MASTER

The Dungeon Master (DM) is a player with a special role. They are a referee, narrator, and show runner, and play the game world, including all non-player characters (NPCs).

1. THE GAME

As a TTRPG, Yabec is a sequence of situations. The DM will describe a situation in the game world as it is observable to your character, about which you may ask clarifying questions.

Eventually the dungeon master will ask you to act based on the information received, sometimes with a time limit. When you make your choice, the dungeon master will resolve it using dice or another game procedure, then advance to another situation.

3. TEAMWORK

In most cases, the group acts as a unit, however sometimes characters do act individually.

The group should act in a coordinated manner. The dungeon master should not allow one character to act against the interests of the group, and will often wait to resolve

one character's actions until the actions of the group are settled.

4. ADVENTURE

Most adventures begin in a town. There, players can talk to the inhabitants, buy equipment, and search for rumors.

Once everyone is ready, players group up to delve into a dungeon.

In the dungeon they map its hallways, search its rooms, and try to steal its treasure without being killed.

Once the party is ready to leave, they return to town to split the spoils.

The world is large, so players may even travel to a different area of the world.

1. THE THREE GAMES

This basic game is exclusively a dungeon crawl. Players go room by room, clearing floor after floor.

The advanced game expands the pervuew of the advenure. Players also explore towns and complete multiple quest lines, perhaps a negotiation with a local ruler, or a journey to multiple adventuring locations.

The expert game makes players powerful rulers, and parts of the game world itself. Players build strongholds, raise armies, and negotiate with kings.

5. TURNS

The most important resource is time. **Turns**, sometimes called "dungeon turns", are about 10 mintues of in-game time. Each turn, many things happen in the background: torches burn slowly, monsters lurk in the darkness, guards go on patrol. The dungeon master will **knock twice on the table** to subtly convey the end of a turn, and will announce events that come with it if there are any.

1. ROUNDS AND INITIATIVE

Within a turn, when there is a great time pressure, such as during a chase or during combat, the dungeon

master will announce the start of combat (**initiative**).

During initiative, time is primarily measured in **rounds**, which last around 5 seconds.

At the start of each round, the dungeon master and the players each roll a d6. If the players roll higher or equal to the DM, they go first. Otherwise, the monsters go first.

Each round, each character can take only one **action**. Then they must wait for the next round to act again.

2. OPTIONAL: INDIVIDUAL INITIATIVE / WILLED ACTIONS

Instead of announcing initiative, the dungeon master will announce willing of actions at the start of each round. Players discuss, and then announce the type of action they wish to take. The initiative die they roll is on the table below.

Players who roll a four or higher act before monsters. Players who roll three or lower act after.

Action	Initiative
Sprinting	d10
Ranged Attack	d8
Thief	d8
Melee Attack	d6
Stunt	d6
Magic	d4

6. CHECKS

When you dungeon master asks you for a check, roll the appropriate dice (d20 unless said otherwise) and try to roll less than or equal to the target number. Tell the dungeon master if you succeed or fail.

The most common type of check is an ability check, but you may also have to roll under your physical or magical saves.

1. ATTACKING

Attack checks (or attack rolls) have a hidden target number called an armor class, or AC. If the dungeon master has not announced the AC of a monster, simply tell the DM the value of your check.

To check your attack, take your AV (attack value) and subtract a d20. If it is less than or equal to the enemy's AC, you succeed in your hit and must roll damage.

2. DODGING

Dodge checks (or dodge rolls) have a hidden target number called an attack value, or AV. If the DM has not announced the AV of a monster, simply tell the dungeon master the value of your check.

To check your dodge, roll a d20 and add your AC. If it is less than or equal to the AV, you succeed and dodge the attack.

3. ADVANTAGE AND DISADVANTAGE

When making a check with advantage, attempt twice. If you succeed on either roll, you succeed the check.

When making a roll with disadvantage, attempt twice. If you fail on either roll, you fail the check.

You cannot have multiple stacks of advantage or disadvantage, and they cancel each other out.

DUNGEON EXPLORATION

This is the main game. It's dungeon time, fuck yeahh.

1. SEQUENCE OF PLAY PER TURN

A **turn** represents roughly 10 minutes of game time, or one activity in the dungeon.

The DM will knock their table to mark the end of a dungeon turn.

1. **Activity:** The party decides what to do, e.g. moving, searching, listening, investigating, talking, fighting.
2. **Description:** The dungeon master describes what happens, what is seen, if monsters are encountered, etc.
3. **Hazards:** The dungeon master checks hazards.

1. HAZARDS

A hazard check encompasses a variety of time based treats to adventurers. The dungeon master rolls a d6 to determine the hazard.

d6	Effect	Description
1	Nothing	The adventure continues.
2	Burn	Torches burn out, and lanterns need fresh oil.
3	Fatigue	Lose well-rested or become fatigued. If already fatigued, take 1d4 damage.
4	Shift	Traps reset, doors swing close, near-death players die, etc.
5-6	Encounter	Chance of random encounter with a monster.

2. MOVEMENT

1. MARCHING ORDER

While moving through narrow doors and halls, movement is restricted. The marching order is decided by the players. In general, only the front and the back are significant.

2. TRAVEL DISTANCE

If nothing else ends the turn, moving through three zones (i.e. three rooms/hallways) is a turn. By

moving quickly through a familiar area, you can move up to nine zones instead.

3. DOORS

Eavesdropping at a door or corridor can reveal what lies beyond. Roll a d6, and add the bonus from your wisdom score. Some classes, like thieves, have additional bonuses.

On a result of six or more, the dungeon master will reveal sounds you are able to hear.

When opening a door, check your strength. If you fail, the door makes a loud sound. Otherwise, the door opens silently. Only a player at the front of the marching order can open doors; opening a door implies moving to the front. If there is not a door, a player can instead check their dexterity to approach silently.

Physically destroying a door takes a full turn, requires appropriate tools, and makes loud noise.

3. ENCOUNTERS

1. SURPRISE

Players can surprise monsters when opening a door quietly, or charge into a room. Players are unable to surprise monsters when carrying a light in a dark area, and after making a loud noise. Monsters can surprise players when hidden in a room, or after stalking the players for one turn.

Surprised creatures take no actions the first round of combat, are automatically hit by attacks, and make a morale check.

2. REACTION

The dungeon master might roll to determine monster reaction, especially on random encounters. The dungeon master might include a reaction modifier from either the players in the front or a player initiating a confrontation.

2d6	Result
<=2	Attacks
3-5	Hostile, may attack
6-8	Uncertain, confused
9-11	Indifferent, may negotiate
12 or more	Eager, friendly

3. WANDERING MONSTER

The traditional method calls for a 1-in-6 chance every other turn. To match these odds exactly with the hazard die, roll a d4 for each check, with a result of a 1 indicating a monster. I like to use a d6 with the following results: a 1 is always a monster. 2 is a monster or an omen depending on if it is a dangerous area, if the players have been especially noisy, etc. 3 is always an omen. 4 through 6 are safe.

Monsters appear 1d4 zones away.

4. EVADE

When two groups encounter one another, one or both may decide to evade the other, or one group may decide to pursue the evading group.

- If both choose to evade, nothing happens.
- If one chooses to evade, and is not pursued, nothing happens.
- If one chooses to evade, and is pursued, the chance of successfully evading is 3-in-6. If they fail, begin combat.
- If a group is surprised, they are unable to evade nor pursue.

5. MAPPING

Once the encounter (if any) is settled, players are able to observe the room for long enough to add to their map.

4. MISC

1. SEARCHING

Very little treasure will be obvious at first glance. Searching:

- Reveals all non-obvious features, such as traps.
- Will always reveal everything it can.
- Takes a minimum of three people per zone.

- Is a turn.

2. REST

Ignore the fatigue hazard while resting. A wandering monster will disrupt a rest.

Taking a turn to rest removes fatigue. If not fatigued, end spells that last until fatigue and become well-rested.

5. LIGHT

There are three levels of light:

- **Dark:** The darkness is pitch black, and prevents sight. Imposes blindness.
- **Dim:** Allows some detail to be seen.
- **Bright:** Allows full vision, including details and reading. Disables infravision.

A light source casts bright light within touch, and dim within close.

1. INFRAVISION

A special type of vision had by many monsters: seeing heat energy that radiates of living things. Negate the effect of dark. When a creature with Infravision suddenly goes from dark to bright, they are blinded for one round, and their infravision is disabled until they spend a full turn in the dark.

It is not possible to read in the dim or dark with infravision.

6. ZONES

The dungeon environment is split into zones. As a rule of thumb, each room and hallway is a zone. Large rooms or hallways may be multipole zones.

1. GUIDELINES

- **Architecture:** Architectural features, such as doorways, should divide zones.
- **40':** Rooms bigger than 40', and hallways longer than 40', should be multiple zones.

- **Even:** Large rooms and hallways should have their zones divided evenly.
- **Whole Number:** Large rooms and hallways should always have a whole number of zones.

2. RANGES

Ranges and relative location are divided into four ranges:

- **Touch:** Striking distance.
- **Close:** Throwing distance. Speaking distance. Within the same or adjacent zone.
- **Distant:** Shouting distance. Up to 2 zones away. Farthest distance to make out details (in bright light).
- **Sight:** Anything that can be seen. Up to 3 miles in ideal conditions.

7. LOST IN THE DUNGEON

Should the session end with the adventurers unsure of a way out, the dungeon master can employ the following table. Each player rolls a

d12, adds their level, and subtracts the level of the dungeon they are on.

d12	Result
<=2	You are consumed by the horrors below. You die and your body is unrecoverable.
3	You are slain and rise from the dead as a wight. It carries your equipment, and slaying it will be required to resurrect you. The dungeon master adds it to the wandering monsters.
4-5	You die somewhere in the dungeon.
6	You are possessed! The dungeon master adds you to the wandering monsters. When encountered, you will be hostile, but can be captured and exorcized.
7	You are lost and starving in the dungeon. Roll again at the start of next session.
8	You are captured! Your party members can pay ransom of 50gp x your level, or leave you hostage in the dungeon.
9-10	You suffer a terrible injury. Roll dismemberment.
11-12	You have survived!
>=13	You have survived, and the gods look favorably on you! If lawful: learn the location of a treasure. If chaotic: learn something about an enemy. If neutral: gain 10 xp.

COMBAT

Combat is one of the primary ways to gain experience, and is inevitable for those who choose to dungeon delve.

1. ACTIONS

1. **Attack:** Do either or both in any order: make an attack with a weapon, move to an adjacent zone.
2. **Run:** Move two zones.
3. **Focus:** Until the end of the next round, you have advantage on dodges, saves, attacks, and checks.
4. **Magic:** Cast a spell or use a magic item. See Magic. You must not have taken damage this round in order to cast a spell.
5. **Stunts:** Creative maneuvers. See below.
6. **Standby:** Do nothing; alternatively, prepare or recover from another action.

2. STUNTS

Stunts are grappling, tripping, or any other kind of creative option. Stunts may not cause damage directly, but can do about anything else.

How stunts are resolved is up to the dungeon master. These are provided as examples.

- **Shove:** On hit, 3-in-6 chance of moving an enemy.
- **Flinch:** On hit, allows creatures to move through the target's space.
- **Sunder:** On hit, deals 1d4 - 1 damage to the weapon or armor.
- **Disarm:** on hit, disarm an enemy if they fail a **DEX** check.
- **Intimidation:** With a creative threat, and successful **CHA** check, force enemies to make a morale check.
- **Wrestle:** Become prone. If the enemy fails a **STR** check, an enemy is also prone.

3. ATTACKING

Melee attacks have a range of touch. Ranged attacks have a range of distant (i.e. in adjacent zones or closer).

1. STATISTICS

The Armor Class (AC) is how likely a target is to be hit. The base armor class of an unarmored character is 9.

The Attack Value (AV), also called THAC0, is how likely an attack is to miss.

Lower AC and AV are better.

The Dungeon Master might either announce the result of the attack, or tell you the AC/AV so you can announce it yourself.

4. DAMAGE

Damage represents injury, exhaustion, and wear. Yabec uses a damage up system, meaning instead of losing HP, you gain damage.

You cannot have more damage than you have HP.

1. SLAIN

When a creature has damage equal to its HP, it is slain.

Slain hirelings and ordinary monsters instantly die.

Slain PCs and powerful monsters are near death.

If a creature is slain with a blunt weapon, they can be left non-lethally incapacitated until a shift.

Creatures slain with non-blunt weapons bleed out within minutes.

If slain by fire or explosion, all items are destroyed and death is instant. Magic items have a chance of miraculously surviving.

5. HEALING

Healing removes damage.

1. MAGICAL HEALING

Magic potions or spells can provide instantaneous healing.

When magically healing a near death character, they dismember with advantage.

2. BANDAGE

Bandages can be used to remove damage.

To heal, make an intelligence check. If you succeed, heal the target 1d6, plus a bonus from your **WIS**.

You may bandage yourself, and bandages cannot be reused.

6. CONDITIONS

1. PRONE

Attacks against prone creatures have advantage. A creature is prone until it uses a Standby action to stand up.

2. GRAPPLED

When two or more combatants begin grappling, they can not move, nor stand up from prone.

3. INCAPACITATED

Attacks against an incapacitated creature hit automatically. An incapacitated creature is unable to move or take other actions.

4. RESTRAINED

A creature restrained by rope, manacles, or a hold spell is incapacitated. If restrained by mundane forces, a creature can attempt to break out of it.

5. TURNED

A turned creature is overcome with fear, cowering when unable to flee.

6. BLIND

A creature who is unable to perceive their surroundings.

- make all attacks, checks, and saves with disadvantage
- are always hit by attacks

7. EXHAUSTION

At the end of the 9th round, and each round after, all creatures still involved in the combat take 1 damage.

8. NEAR DEATH

Characters that are near death:

- Can not move, take any actions, use spells, or use magic items.

- Die during a shift.
- Are automatically hit by all attacks.
- If they would take damage, they instead dismember.
- If they would be healed, they instead dismember. Then, if they survive, they stop being near death and heal 1 damage. If healed by magic, they dismember with advantage.

1. DISMEMBERING

Every dismember carries a chance of death. Roll a d100, and subtract **CON**. Reference the table.

Result	Dismember
>= 70	Dead!
65-70	Mostly dead: Until fully healed, you can only be healed magically.
51-65	Terrible Scar: -1d4 CHA, -1d4 HP.
45-50	Lost arm: Can't use two-handed weapons nor shields. Losing a third arm is fatal.
36-40	Lost eye: If you lose both eyes, you are blind. Losing a third eye is fatal.
31-35	Concussion: -1d4 wisdom and intelligence
26-30	Torn muscle: -1d4 DEX
21-25	Bone fracture: -1d4 STR
11-20	Broken rib: -1d4 CON
<=10	Miraculously unharmed!

9. MORALE

Monsters and hirelings might have the morale broken. They check their morale when:

- first death on their side
- leader killed
- group reduced by half
- last remaining is bloodied (half HP)

The dungeon master rolls 2d6. The check fails if the result is greater than their morale / loyalty score. They surrender or flee.

10. MISCELLANEOUS

1. DIFFICULT TERRAIN

The first attempt to move out of difficult terrain fails. i.e. it takes two moves to pass through.

2. FLANKING

In melee, if one side surrounds the other, the surrounded side has a +4 penalty to AC.

3. FRIENDLY FIRE

When a ranged attack misses, players make a dexterity check to void hitting an ally. Monsters and hirelings have a 3-in-6 chance.

4. MAPPING

During combat, it's possible to reference a map, but adding to a map is impossible.

11. VARIANT: ROLLESS COMBAT

This alternate combat system doesn't use attack rolls or armor class. The feel of the combat will be different, and may be more appropriate for single combat. It can also be applied asymetrically. i.e. players make dodge rolls but not attack rolls.

1. ARMOR

Armor prevents some damage. Consult the table below to determine how much damage can be prevented each combat.

AC	Damage
≥8	2
7	4
5-6	6
3-4	8
1-2	12
≤0	16

2. ATTACK VALUE

Combatants with an AV of 15 or less deal +1 damage, with 11 or less deal +2, and with 20 or greater deal -1.

3. ATTACK TARGETS

When making a weapon attack, the attacker chooses a target. Attacks against the torso always hit. Attacks against another target require one or more ability checks to hit, but have additional effects.

- **Torso:** guaranteed hit.
- **Leg:** Requires a **STR** check. The attack also trips the opponent.
- **Gut:** Requires a **STR** check. The attack deals an extra d8 damage.
- **Weapon:** Requires an **INT** check. The opponent deals 4 less damage on their next attack.
- **Hand:** Requires a **DEX** and **INT** check. The attack also disarms the opponent.

4. OBJECT INTERACTIONS

Each round, combatants have one object interaction, which they can use to pick or draw a weapon, drink a potion, stand up from the ground, or similar.

5. MAGIC ATTACKS

Instead of an attack roll, touch spells require a successful dexterity or strength check.

MAPPING

Dungeons are complex environments where it is easy to get lost. Keeping a map is essential. To keep the dungeon mysterious, it is discouraged for the DM to provide an exact map.

The Dungeon Master should avoid looking at the players map, and avoid perfecting the players map.

Its recommended that one player take on the role of Mapper. See Roles.

1. WHITEBOARD METHOD

The dungeon master has a clipboard, a page protector, 1/2 or 1/4 graph paper, and a dry erase marker. They can draw out the current and near rooms. It is then up to the players to copy and connect the rooms. As the players adventure deeper into the dungeon, the dungeon master erases and draws new areas.

2. FLOWCHART METHOD

Rather than track the exact dimensions of every room, the mapper might opt to keep a general shape of

the dungeon with a loose flow chart, labeling rooms and their connections.

3. OPTIONAL RULE: CALLS

Instead of having the DM physically draw rooms, the mapper can instead work out a system of dungeon calls. by which to describe the shape of a dungeon.

While not in combat, the mapper can ask the dungeon master for a call. Each call should have an unambiguous meaning. The mapper and Dungeon Master should work together to establish calls that work for them.

GFC's video is a perfect explanation of dungeon mapping. This page is a written guide based on their advice.

Additionally, you may wish to modify the system to better suit your needs. Any non-ambiguous agreed upon system will work.

1. RESTRICTIONS

The Dungeon Master will only provide calls when the players ask, and only after they enter a room and are able to spend time observing it.

CLEAN UP

1. EVALUATE LOYALTY

Hirelings, if any, adjust their loyalty score. For each hireling, roll a d6.

1. Requests to have a 50% raise. Leave on good terms if not granted.
2. If they succeeded a loyalty check this session, they gain one loyalty.
3. If they failed a loyalty check this session, they loose one points.
4. If an animal or monster got to eat its favorite prey, they gain one points.
5. The hireling makes a loyalty check. Gaining one loyalty on a success, and loose one on a failure.
6. If a hireling died that session, non-monster hirelings loose three loyalty. You have a 1-in-6 chance to loose one renown to a minimum of one.

2. DIVIDE TREASURE

The Scorekeeper (usually the Scribe) totals the value of the treasure, and splits it between the players.

Money is typically split evenly, while specific items can be diced or bargained for.

3. EXPERIENCE

Experience points (XP/EXP) is a measure of a PC's power, and creates progression.

At the start of the session, the Scorekeeper will begin a score card: a simple piece of paper to write down scores (enemies killed, treasure found, etc) as they happen.

At the end of the session, the Scorekeeper will confer with the dungeon master to confirm each score, and establish the total amount of XP. XP is divided evenly between all players. Players who had a character die can put the XP to their next character. The Score Keeper will

announce the individual amount gained.

1. OPTIONAL RULE: PRIME REQUISITE

Each class has one or two prime requisites, which grants bonus XP for having a high ability score.

Characters with at least a 13 in one prime requisite gain 10% extra XP.

Characters with at least a 13 in both gain 15% extra XP.

Characters with at least a 18 in one prime requisite gains 15% extra XP.

2. TREASURE

Recovering treasure from a dungeon scores 1 XP per 1 cp value of the treasure.

Potions and spell scrolls score 100 XP, while other magical items score 1000 XP.

3. DEFEATED MONSTERS

Defeating monsters scores XP based on their HD, plus a bonus for each special ability. E.g. a 2 HD monster with an ability is worth 25 XP.

HD	Base	Bonus
<1	5	1
1	10	3
2	20	5
3	35	15
4	75	50
5, 6,	300	250
7, 8,	650	550
≥9	1000	700

4. OPTIONAL: MAPPING

Exactly mapping a complete dungeon level scores XP equal to 1000 times the depth of the level.

5. OPTIONAL: FREED SLAVES

Returning someone from captivity to their society of origin scores 100 xp.

6. OPTIONAL: ROLES

Fulfilling a role scores Lvl * 100 XP to the person who completed the role. This XP is applied at the beginning of the next session.

4. LEVELING UP

When a character gains enough XP to reach the next level:

- Update any improvements in saves, AV, etc. from your class progression table.
- Roll a number of HD equal to your level. If it is greater than your current HP, that is your new HP. Otherwise, increase your HP by one.
- Increase one ability score by 1, to a maximum of 18.

1. LEVEL LIMIT

Characters cannot advance more than one level in one session. Leave the character 1 XP below the threshold for the next level. The remaining XP, at the player's discretion, be distributed among all other characters that went on the adventure (including NPCs).

5. ABANDONMENT

A character of 2nd level or higher can be abandoned. They permanently leave the game. Abandoned characters can leave 50% of their wealth and 80% of their XP to a new character.

6. FUNERALS

1. BURIAL

Simple burial prevents the body from being reanimated. Temples will

bury and bless the dead for free. If a cleric uses one turn to perform a blessing, the soul will pass peacefully.

When a character is buried in town, a funeral can be given. For each cp spent on the funeral, that player gains 1 XP, to a maximum of 100 times the level of the character being buried. In addition, all players that attend the funeral gain XP equal to 10% of the total cp spent.

Cremation prevents reanimation and is impossible to undo.

2. INHERITANCE

Money and items stored in town will be subject to a 15% estate tax to local government or temple, and then inherited by the next of kin or listed heir. Further embezzlement can be done through downtime.

3. RESURRECTION

Returning from death leaves you exhausted. Until the reincarnated gets two downtimes of bed rest, they have 1 HP, move at half the normal rate, cannot carry heavy items, and cannot attack, cast spells, or use class skills.

Each time a character is resurrected, their constitution is reduced by 1.

PLAYER ROLES

Using roles makes play smoother and easier for everyone.

Voluntarily taking on a role scores $\text{Lvl} * 100$ XP at the beginning of next session.

It's possible to split a role's responsibility between multiple people. For example, there can be a caller for exploration and a caller for combat, or someone who writes a session report keeping track of significant events and characters while another player keeps score and notes AC and AV of each encountered enemy.

Additionally, if a player is up to it, they can do multiple different roles.

1. MAPPER

Keep track of the layout of the dungeon. See Mapping.

2. CALLER

Get consensus on what the party would like to do, and communicate to the Dungeon Master. Additionally decide where the party will go this session, and ensure every player has what they need for the adventure (rations, antidotes, blessed weapons, etc).

3. SCRIBE

Write a session report, including significant names and events, monsters encountered as well as their behavior and combat statistics, and traps found around the dungeon. Additionally must keep score, taking note of each enemy defeated and tallying them up at Cleanup to distribute money and XP.

CHALLENGE

1. OBJECTIVE

At the start of a challenge, the dungeon master will announce the number of successes needed to complete the challenge. as well as the number of failures to fail the challenge.

2. PROCEDURE

1. Players make action to confront the challenge, and how they will support each other.
2. Dungeon master will say which ability to use, and if it is risky.
3. The player makes the check, with advantage for each supporter.

3. RISKY

Risky checks start with two disadvantages, and results in either two failures or two successes.

NEGOTIATION

1. WHEN TO NEGOTIATE

Negotiation does not change an NPC's character. Instead, players convince an NPC that a certain course of action, is actually in character.

- Plausible request. Players need to write this down.
- NPC has reason not to immediately support the players.
- NPC wants to negotiate.

2. STATISTICS

The NPC has four stats: interest, patience, motivation, and pitfall.

Interest ranges from 0 to 5. If interest reaches 5, the NPC makes an offer. If interest reaches 0, the NPC ends the negotiation without an offer.

Patience ranges from 0 to 5, and can only be reduced. When patience reaches 0, the NPC makes a final offer.

The dungeon master uses this table to determine the starting stats.

Attitude	Interest	Patience
Hostile	1	2
Neutral	2	3
Friendly	3	4

When an argument appeals to a motivation without mentioning a pitfall, the result gets better. When it appeals to a pitfall, it gets worse.

Each NPC will have about three motivations and about two pitfalls.

1. Benevolence
2. Discovery
3. Freedom
4. Greed
5. Higher Authority
6. Justice
7. Legacy
8. Peace
9. Power
10. Protection
11. Revelry
12. Vengeance

3. DISCOVERING MOTIVATION (AND PITFALLS)

A player can attempt a wisdom or intelligence check to check a particular motivation. If they succeed, the dungeon master will confirm whether it is a motivation, pitfall, or neither. However, if they fail, reduce patience by one. Once the players make this check, they can not do so again until they make an argument.

An NPC with interest 3 or more may hint at their motivations if asked.

Outside of negotiation can interrogate close friends, or otherwise preform recognisance.

4. ARGUMENTS

Players must make a full argument the NPC; that is, what the NPC should do, and why.

The dungeon master will determine if this appealed to any motivations or pitfalls.

If it appeals to a pitfall, the NPC loses one patience AND one interest.

Otherwise, one player will make a wisdom or charisma check. Compare the result on the table.

-	Motivation	Normal
Success	+1 interest.	+1 interest, -1 patience.
Failure	+1 interest, -1 patience.	-1 patience

If the argument contains a lie, and it fails to increase interest, the NPC catches it and is offended, losing an additional patience.

5. OFFERS

After making an argument the NPC makes an offer based on their interest.

Interest	Offer
0	No, and...
1	No.
2	No, but...
3	Yes, but...
4	Yes.
5	Yes, and...

Keep Going?

If the NPC has remaining patience, the negotiation, or accept the offer and their interest is between 1 and as is.
4, the players can choose to continue

OVERLAND TRAVEL

Within one region of the world, travel can be handwaved, perhaps having a chance of random encounter. When traveling between regions, the dungeon master will prepare a map with events, and paths, as well as tables for survival events, monster encounters, and treasure.

1. SURVIVAL POINTS

The group begins with 7 travel points. They can never have more travel points than they start with. If they loose all travel points, everyone dismembers, and returns to the begining.

Travel points can be lost by failing survival events. They can be restored at rest sites.

2. EVENTS

There are four general types of events, thought the dungeon master may further delineate these

- Rest site
- Survival event
- Monster encounter
- Location or mini dungeon

At the end of each event, the party must consume one ration, or loose a survival point.

All spells that end on a fatigue, burn, or shift also end at the end of an event.

3. TIME OF DAY

There are four times of day: dawn, noon, dusk, and night. Events may have different effects depending on the time of day.

4. REST SITE

At a rest site, the party chooses either to heal 1d6 and regain 1 survival point, or to roll on the treasure table. Below is a tiny example treasure table:

1. Sword in the stone: a +1 sword is stuck in a stone. Removing it requires three consecutive successful strength checks, and one successful charisma check. Each character can only attempt once.
2. Spider tree: a skeleton lies in a pool of water holding a shield of resistance 3. Above it lurks a 6HD adventure-eating spider. If night time, the ghost of the dead adventurer will also protect the shield.
3. Blessed clearing: divine spell casters can pray in this clearing. It has a 6-in-6 chance to restore a 1st level spell, 3-in-6 to restore a 2nd level spell, and a 1-in-6 chance to restore a 3rd level spell.
4. Mysterious stranger: a traveler approaches the party in search of healing from a potion of healing, cure wounds, or similar. If granted they will give a gift, depending on the time of day: dawn: a pearled silver pendent with the emblem of house Loimur worth 1d6 * 100 cp. noon: potion of d6 (1: bless 2: remove fear 3: fire resistance 4: cold resistance 5: poison 6: invisibility) dusk: random wizard spell scroll of 1st or 2nd level. night: random cursed magic ring. There is a 2-in-6 chance the stranger knows what item he has.

5. SURVIVAL EVENT

These are short challenges representing survival challanges. Below is a tiny example survival event table:

1. Lost: loose one survival point. succed a wisdom check or loose a second.
2. Shortcut: if you choose to take the shortcut, 3-in-6 chance to gain and 3-in-6 chance to loose a survival point.
3. hungry wolves: feed them three rations or loose one survival point.

4. Food poisoning: everyone makes constitution checks. If 50% or more fail, loose 1 survival point and a ration.

BATTLES

This system abstracts armies into forces, and assumes that troop quality, terrain, and luck can affect the outcome of the battle. It also assumes that characters know how to fight; i.e. players do not need intimate knowledge of war tactics.

A force is commanded by a single leader, often a player character. There may be secondary leaders called officers. The rest of the fighting persons are called troops.

1. SUMMARY

1. When a force is assembled, calculate the Force Rating (FR).
2. When a battle begins, calculate the Battle Rating (BR).
3. Roll the dice.
4. Apply the combat results.

2. FORCE RATING

Five things affect the force rating: leadership, experience, training, equipment, and magic. Start from zero, and add each bonus to the total.

Round down at the end of all the calculation.

1. Add the level of the leader.
2. If the sum of their intelligence, wisdom, and charisma is at least 40, add +4.
3. If at least 1% of the force is 9th level or higher, aside from the leader, add +2 per 1%.
4. If there is at least one officer per 40 troops, add thrice their average level / HD.
5. Add twice the average level / HD of the troops.
6. Add +1 per victory, and -1 per rout, in the last ten years (max +/-10).
7. Add +1 per week of training this year (max +20).
8. Add 10 if the leader doubles the force's cost to upgrade their weapons.
9. If the troops are at least 90% elves, dwarves, or similar fantastic creatures, add 15.

10. If there are monster troupes with two or more special abilities (asterisks), then add 2 for each 1% of the force with two or more special abilities.

Increase the FR by 10% for each of the following:

1. 20% is mounted.
2. 50% is mounted.
3. 20% can fire missiles.
4. 1% has magic abilities, such as spells, magic items, breath weapon, regeneration, etc.
5. 20% has magic abilities.
6. 100% has magic abilities.
7. 1% can fly.
8. 20% can fly.

3. CALCULATE THE BATTLE FORCE

The BF represents the conditions of a particular battle. It is equal to the FR, plus the following bonuses:

1. If the force outnumbers it's opponent by at least 1.5:1, add 10 times the ratio.
2. If they are in their dominion, or the dominion of their liege, add 10
3. If they have beaten this foe before, add 10
4. If they are surprised, subtract 30.
5. If an allied or accompanying force has been routed, subtract 10.
6. If on the high ground, add 20.
7. If defending a point, add 10. If defending a narrow defile, pass, or bridge, add 50 instead.
8. If on favored terrain (e.g. dwarves in mountains), add 20.
9. If attacking at night and has infravision, +20.
10. If immune to enemy attacks, add 150. If just 1% is immune to enemy attacks, add 50.
11. If fatigued, subtract 10.
12. If very fatigued, subtract 30.

4. ROLL THE DICE

Each side rolls d100 and adds it to their BF. Whosever total is higher wins the battle.

5. BATTLE RESULTS

The difference in the final BF's determines the results.

Difference	Casualties	Fatigue	Location
	W : L	W : L	W : L
1-8	0 : 10%	- : -	A : R
9-15	0 : 20%	- : -	A : R
16-24	10% : 20%	- : yes	A : R
25-40	20% : 30%	yes : very	A : R+1
41-60	20% : 40%	yes : very	A+1 : R+2
61-80	30% : 50%	yes : very	A+2 : R+3
81-100	20% : 60%	yes : Rout	A+3 : Rout
≥101	10% : 70%	- : -	A+4 : Rout

- W: Winner
- L: Loser
- A: Advance a terrain unit.
- R: Retreat a terrain unit.

Casualties: First calculate the total number of casualties, round up. Half of them die outright. If retreating, the opposing army can choose to kill, take prisoner, or allow the injured to flee. Any

surviving injured can return to action in 1d4 months.

Fatigue: a force will remain fatigued for 1d4 days. A very fatigued force will become regular fatigued in 1d4 days. A fatigued force that becomes fatigued has its resting time reset (minimum 1 day extra).

Rout: The force ceases to exist. Any survivors find their way home 1d10 weeks later.

6. SIEGE

When a force dells in a fortress or similar defensive structure, a siege begins.

At any time, the defending force can venture from the fortress, and have a normal battle, possibly even catching the attackers by surprise.

At any time, the attacking force can attack the fortress. The defenders have a +100 bonus to BF, but the attacking forcer takes half the casualties.

Additionally, each consecutive week of sieging, the defending force gets a cumulative -5 to FR. If they run out of food or water, they begin accumulating -15.

APPENDIX A - ADDITIONAL NOTES

1. MODIFICATION

The book is meant to act as a standard reference for how the Dungeon Master makes rulings. While the Dungeon Master's call is ultimately final, its recommended to stick to the book, and later change unsatisfactory rules. Yabec is open source, and available on Github.

If players don't like the rules, they should begin a conversation about how they would like the rule, and the kind of game they are interested in playing. When an agreement is made, it should be reflected in the book. If they have other games they are interested in playing, they should also bring those to the conversation. /gen

The book also acts as a suggest stock of rulings. If the Dungeon Master should be able to appeal to the book, and get a simple but opinionated rule. The new rule should not disrupt the flow of play, but rather maintain it. If the rule turns unfun, it should be ammended via the above process.

2. METAGAMING COMMENT

I have a lax approach to metagaming. Any info gained during the session is valid, including;

- Info from dead characters.
- Deduced AC and Hit Dice.

What would be metagaming would be searching the internet for answers, or reading the adventure source books.

This comment is meant to give the superflous mechanical permission to do this.

3. APPENDIX B - THE WEST MARCHES

Life in the walled city is safe. Beyond its barrier is the WEST MARCHES, where monsters roam and acient treasure lay.

West marches is a style of play. There is an open fantasy world, maintained by one or more dungeon masters. Players organize freely into adventuring parties, exploring where they may. At least three players are needed to run, but ideally four to six. Dungeon mastes may be prepared to run for as many as a dozen players. Players should be enterprising, conspiring to meet and secure valuable treasure,sharing bits of lore and secrets with eachother.

CHANGE LOG

What's changed since the last version of Yabec? The current print version is 3.3! Get involved with Yabec development on [Github](#)!

- Hireling inventory reduce.
- Henchmen rules didn't state you could only have one until now.
- Loyalty evaluation tweaked and moved hire in the page.
- Level up ability score increase limited.
- Added mundane research downtime.
- Revised dismemberment: its a d100 roll, con score is less significant, deadlier, added terrible scar. removed broken leg.
- XP score for potions and spell scrolls has been reduced to 100 xp, so i can give more of them without tilting xp payout.
- Revised magical research.
- Revised spells:
- Elves and dwarves hate eachother.
 - Wizard: -augury, +burning hands, +acid arrow, invis 10'r is 3rd lv.
 - Cleric: -detect magic, +portent, bless is magical weapon, greater cure wound is 3rd lv, +supreme cure wound
 - Druid: +portent, +acid arrow
 - Warlocks blood offering affects the current spell, not the next one.
- Added expert game features, such as warfare and construction.
- Tweaks to items:
 - function of slow weapons clarified, and added a quick draw rule. fragile weapons degrade via a degradation die, instead of -1 enchantments.
 - unlisted item damage rules. armor is more expensive. forging is more expensive.

1. ALL CHANGES IN FROM VERSION 2

- Overhauled travel again! the point crawl rules are sill available [here](#)
- New pdf rending engine uses [Selenium](#) which fixes many rendering issues. A single voulme manual is now also available.
- Cure poison and cure disease spells have been merged
- Animalkin's claws become magical at 5th level.
- mapping section now favors the white board method as it is the most intuitive. The visual aids for the call method have been removed.
- Optional xp from freeing slaves. other sources of xp also listed as optional, though there'll be no change in how I score.
- added rolless variant combat
- added constuction rules
- Tweaked downtime options
- Minions overhauled again! See below.
- Saves are roll under, and there are now only two. Update you character sheet.
- Spell descriptions continue to be updated
- Travel rules overhauled to allow for camping
- Tweaks to: weapon stats, combat rules.
- Reorganized the pages and formatting, and added additional links and navbars to the website. It should be easier to navigate.

Rulings I'm going back on:

- Resting while not fatigued prevents the next fatigue. This is a reasonable action with analogues in clock hazard games.

- Resting while not fatigued can extend spells, but only when done before casting. This rewards player planning, and spells which would become op can end on a shift instead of fatigue. For the exact rule see **both the hazard and resting sections**

1. WHATS CHANGED SINCE 3-0

- Renamed items page to shop
- Tweaks to travel:
 - Camping doesn't consume rations
 - Added water path
- Changes to classes:
 - clerification on fighter and animal kin
 - Added Animal kin yapper
 - Added telepathy, and realign to mystic, as well as implementing spell descriptions and other tweaks
 - High level dwarves can speak to stones
 - Reworked kobold. Now their gimmick is gathering kobold.
- Tweaks to minions:
 - Minion evaluation can raise renown to 6, previously 5.
 - Torch bearer restock and 2 slots. Added journeyman torch carrier

- Clarification on gambling
- Fixed various typos and formatting.

2. MINIONS

Minions are replaced by hirelings. There will be less paperwork, and better balance.

- The maximum number of hirelings is now called "renown". Its still determined by your charisma score like before, and the value hasn't changed.
- Animals still count against your renown.
- All human/demihuman hirelings go out adventuring on their own. (they return any equipment).
- If you like, pick one human minion to hold on to. They become a "henchmen". This a special type of retainer that acts as your sidekick. Reduce their XP by half.
- Many basic types of hireling can be found on the **items list**. They are specialized for different tasks. The lackey can carry many items, the man-at-arms comes ready to fight, and the supplier will restock common adventuring equipment.
- See **hirelings** for more info.

Rolls

Attack (attempt to hit)

your AV -  ≤ their AC

Dodge (avoid being hit)

 + your AC ≤ their AV

Ability (str, dex, con, etc)

 ≤ your Ability score

Save (physical or magic)

 ≤ your Save score

Listen (at door)

 ≥ 6
+ Bonus if thief

Turn Undead (clerics)

  ≥ lookup(HD)
Then turn/destroy
 
HD worth of undead, weakest first.

Thief Skills

 x10 +  ≤ skill score

Roles

Score 50xp for each role announced in town

Mapper

Track dungeon and location

Scribe

Keep track of monster behavior and statistics

Caller

Direct party, get consensus

Score Keeper

Note treasure, and XP

Quarter Master

Track torches, rations, etc

Rules

Dungeons

- Each turn there are random hazards. Each activity takes one turn.
- Open door quietly with a strength check. Alternatively, charge in.
- Monsters make reaction rolls
- Search for secrets.

Combat

- Decide who goes first each round: players d6 vs monsters d6.
- One action each round.
- Actions: Move+attack, run, focus, magic, ready, stunts.
- Subdue with blunt weapons.
- Moral checks on: first death, leader death, half group, half health.

FAQs

How many item slots do I have? Depends on con: 8 is 9 slots, 9-12 is 10. 13 is 11.

How to get more slots? Buy a chest, hire a lackey get a cart

Whats the range of my spell? Unless specified otherwise, it's close (same or an adjacent zone.)

How to get un-poisoned?

Antidote can cure many poisons. The spell remove poison can heal most others. Poison is meant to be lethal

How much HP do I have?

Depends on class: fighters 8, clerics 6, thieves and wizards 4.

What happens when damage exceeds my HP?

You are "near death." Any further damage you must dismember, and risk death. when you are healed, you will dismember a final time.

View the rules online at adambeck.github.io/yabec
