Overland Travel

A point-crawl represents the overworld as a series of points, with paths connecting them.

1. Daylets

Travel time is tracked in daylets. There are four daylets each day: dawn, noon, dusk, and night. Each daylet, you can do one of the following:

- **Travel:** Move from one point to another along a path.
- **Explore:** Your current point.
- **Camp:** near your current point.
- **Forage:** a desperate measure to avoid starving.

At the end of each daylet each character, and hireling must eat a ration. If they fail to, they take 1d6 damage and become fatigued. Ignore this when in a civ point. To speed up play, you can opt to handle rations once each day instead.

At the start of each dawn, if a character did not camp the previous day, they take 1d6 damage and become fatigued.

2. Types

There are three types of point:

- **Soft:** Small feature which may be explored, e.g. an entrance to a cave.
- **Hard:** Feature which must be explored before traveling again. e.g. a narrow mountain pass.
- **Civ:** A town or city, in which you can rest and shop (so long as you aren't notorious).

There are three types of paths:

- **Safe Path:** No effect.
- **Risky Path:** Chance of wandering monsters. Monsters appear at 4d6 x 30 feet, and have a 2-in-6 chance of being surprised.

- **Toll Path:** Toll in silver.

3. Camping

Camping allows a measure of healing in the field, prevents fatigue, and optionally allows the session to end in the wilderness (risky).

1. Decide where to camp.
2. Describe defences, if any.
3. Choose at least two guard groups.
4. Dungeon master makes a check for wandering monsters, and decides which guard sees the encounter.
5. Resolve the encounter
6. Characters heal 1d6. Spell casters can memorize a 1st level spell, half of a 2nd level, a third or a 3rd level, etc.

1. Long Camping (to end the session in wilderness)

1. Decide where to camp.
2. Describe defences, if any.
3. Choose at least two guard groups.
4. End the session
5. Begin a new session
6. The dungeon master will generate 1d4+1 encounters, and determine the guard groups randomly.
7. Resolve the encounters. In between each, Characters heal 1d6. Spell casters can memorize a 1st level spell, half of a 2nd level, a third or a 3rd level, etc.

4. Starvation

If the party runs out of rations, they can forage: Any number of characters roll a d6. On a 4-5, they find one ration. On a 6, they find two. On a 1-3, they take 1d6 damage.

In dangerous areas, you might have to forage with disadvantage.

5. Water

In many areas, potable water is plentiful. However, in deserts and other inhospitable areas, 1 gallon of water is needed per day, or suffer 1d6 damage and become fatigued.

Dungeon Exploration

This is the main game. It's dungeon time, fuck yeahh.

1. Sequence of Play per Turn

A turn represents roughly 10 minutes of game time, or one activity in the dungeon.

1. **Activity:** The party decides what to do, e.g. moving, searching, listening, investigating, talking, fighting.
2. **Description:** The dungeon master describes what happens, what is seen, if monsters are encountered, etc.
3. **Hazards:** The dungeon master checks hazards.

1. Hazards

A hazard check encompasses a variety of time based treats to adventurers. The dungeon master rolls a d6 to determine the hazard.

- **1.Nothing:** The adventure continues.
- **2.Burn:** Torches burn out, and lanterns need fresh oil.
- **3.Fatigue:** Loose well-rested (if you are), become fatigued (if not already), or takes 1d4 damage.
- **4.Shift:** Traps reset, doors swing close, and other aspects of the dungeon are triggered.
- **5-6.Wandering Monsters:** The dungeon master checks for wandering monsters. An additional check is made whenever the players make a loud sound.

2. Movement

1. Marching Order

While moving through narrow doors and halls, movement is restricted. The marching order is decided by the players. In general, only the front and the back are significant.

2. Travel Distance

If nothing else ends the turn, moving through three zones (i.e. three rooms/hallways) is a turn. By moving quickly through a familiar area, you can move up to nine zones instead.

3. Listening and Opening Doors

Listening at a door or corridor can reveal what lies beyond. Roll a d6, and add the bonus from your wisdom score (Some classes, like thieves, have additional bonuses). On a result of six or more, the dungeon master will reveal sounds you are able to hear.

When opening a door, check your strength. If you fail, the door makes a loud sound. Otherwise, the door opens silently. Only a player at the front of the marching order can open doors; opening a door implies moving to the front. If there is not a door, a player can instead check their dexterity to approach silently.

Physically destroying a door takes a full turn, requires appropriate tools, and makes loud noise.

3. Encounters

1. Surprise

Players can surprise monsters when they open a door quietly, or charge into a room. Players are unable to surprise monsters when carrying a light in a dark area, and after making a loud noise. Monsters can surprise players when hidden in a room, or after stalking the players for one turn.

Surprised creatures take no actions the first round of combat, make a moral check, and are automatically hit by attacks.

2. Reaction

The dungeon master might roll to determine monster reaction, especially on random encounters. The dungeon master might include a reaction modifier from either the players in the front or a player initiating a confrontation.

2d6	Result
2 or less	Attacks
3-5	Hostile, may attack
6-8	Uncertain, confused
9-11	Indifferent, may negotiate
12 or more	Eager, friendly

3. Wandering Monster

A high rate of encounters is 1-in-6, a low rate is 1-in-12. Heavily patrolled areas may have an even higher rate. Monsters appear 1d4 zones away.

4. Decision to Evade

When two groups encounter one another, one or both may decide to evade the other, or one group may decide to pursue the evading group.

- If both choose to evade, nothing happens.
- If one chooses to evade, and is not pursued, nothing happens.
- If one chooses to evade, and is pursued, the chance of successfully evading is 3-in-6. If they fail, begin combat
- If a group is surprised, they are unable to evade nor pursue.

5. Mapping

Once the encounter (if any) is settled, players are able to observe the room for long enough to add to their map.

4. Misc

1. Searching

Very little treasure will be obvious at first glance. Searching:

- Reveals all non-obvious features, such as traps.
- Will always reveal everything it can.
- Takes a minimum of three people per zone.
- Is a turn.

2. Rest

Ignore the fatigue hazard while resting. A wandering monster will disrupt a rest.

Taking a turn to rest removes fatigue. If not fatigued, instead become well-rested; end spells that last until fatigued.

5. Light

There are three levels of light:

- **Dark:** The darkness is pitch black, and prevents sight. Imposes blindness.
- **Dim:** Allows some detail to be seen.
- **Bright:** Allows full vision, including details and reading. Disables infravision.

A light source casts bright light within touch, and dim within close.

1. Infravision

A special type of vision had by many monsters: seeing heat energy that radiates of living things. When a creature with infravision stands in bright, they are blinded for one round, and their infravision is disabled until they spend a full turn in the dark.

It is not possible to read in the dim or dark with infravision.

2. Blindness

Creatures who are unable to perceive their surroundings:

- Make all attacks, checks, and saves with disadvantage
- are always hit by attacks

6. Zones

The dungeon environment is split into zones. As a rule of thumb, each room and hallway is a zone. Large rooms or hallways may be multipole zones.

1. Guidelines

- **Architecture:** Architectural features, such as doorways, should divide zones.
- **40':** Rooms bigger than 40', and hallways longer than 40', should be multiple zones.
- **Even:** Large rooms and hallways should have their zones divided evenly.
- **Whole Number:** Large rooms and hallways should always have a whole number of zones.

2. Ranges

Ranges and relative location are divided into four ranges:

- **Touch:** Striking distance.
- **Close:** Throwing distance. Speaking distance. Within the same or adjacent zone.
- **Distant:** Shouting distance. Up to 2 zones away. Farthest distance to make out details (in bright light).
- **Sight:** Anything that can be seen. Up to 3 miles in ideal conditions.

7. Lost in the Dungeon

Should the session end with the adventures unsure of a way out, the dungeon master can employ the following table. Each player rolls a d12, adds their level, and subtracts the level of the dungeon they are on.

d12	Result
<=2	You are consumed by the horrors below. You die and your body unrecoverable.
3	You are slain and rise from the dead as a wight. It carries your equipment, and slaying it will be required to resurrect you. The dungeon master adds it to the wandering monsters.
4-5	You die somewhere in the dungeon.
6	You are possessed! The dungeon master adds you to the wandering monsters. When encountered, you will be hostile, but can be captured and exorcised.
7	You are lost and starving in the dungeon. Roll again at the start of next session.
8	You are captured! You party members can pay ransom of 50gp x your level, or leave you hostage in the dungeon.
9-10	You suffer a terrible injury. Roll dismemberment.
11-12	You have survived!
>=13	You have survived, and the gods look favorably on you! If lawful: learn the location of a treasure. If chaotic: learn something about an enemy. If neutral: gain 10 xp.

Combat

1. Initiative

At the start of each round, the dungeon master and the player each roll a d6. If the players roll higher, or equal, they go first. Otherwise, the monsters go first.

Each round, each combatant can take one action. Then they must wait for the next round to act again.

2. Actions

1. **Move and Attack:** In any order, make an attack with a weapon, and move within or to an adjacent zone.
2. **Run:** Move two zones.
3. **Focus:** Until the end of the next round, you have advantage on dodges, saves, attacks, and checks.
4. **Magic:** Cast a spell or use a magic item. See Magic. You must not have taken damage this round in order to cast a spell.
5. **Ready:** Prepare to attack, move, or stunt if a stated occurrence.
6. **Stunts:** Other maneuvers are stunts. See below.

3. Stunts

the idea of stunts encompasses grappling, tripping, and any other kind of creative option. Stunts may not cause damage directly, but can do about anything else.

How stunts are resolved is up to the dungeon master. These are provided as examples.

- **Shove:** a hit has a 3-in-6 chance of moving an enemy.
- **Flinch:** a hit allows creatures to move through the target's space.
- **Sunder:** a hit deals 1d4-1 damage to the weapon or armor.
- **Disarm:** a hit grants a dexterity check to disarm an enemy.

- **Intimidation:** with a creative threat, and successful charisma check, force enemies to make a moral check.
- **Wrestle:** Become prone. With a successful strength check, an enemy is also prone.

4. Attacking

1. Making an Attack

To attack, subtract a d20 from your AV. If it is less than or equal to the AC, you hit. (low roll good).

Melee attacks have a range of touch. ranged attacks have a range distant (i.e. in adjacent zones or closer).

2. Dodging an Attack

To dodge an attack, roll a d20 and add your AC. If it is less than or equal to the AV, the attack is a miss. (low roll good).

3. Statistics

The Armor Class (AC) is how likely a target is to be hit. The base armor class of an unarmored character is 9.

The Attack Value (AV), also called THAC0, is how likely an attack is to miss.

Lower AC and AV are better.

The Dungeon Master might either announce the result of the attack, or tell you the AC/AV so you can announce it yourself.

5. Damage

Damage represents injury, exhaustion, and wear.

1. Slain

When a creature takes damage equal to or greater than its HP, it is slain. Slain hirelings and ordinary monsters instantly die. Slain PCs and powerful monsters are near death. See below.

If a creature is slain with a blunt weapon, they can be left non-lethally incapacitated until a shift. Creatures slain with non-blunt weapons bleed out within minutes.

If slain by fire, or explosion, items are destroyed, and PCs and powerful monsters instantly die. Magic

items have a chance of miraculously surviving.

2. Item Damage

Items with four or more damage break completely. Magic items are immune to damage.

Each point of damage incurs a penalty:

- **Weapons:** -1 to damage rolls.
- **Armor:** +1 to AC.
- **Other:** -1 to any rolls made with it.

Dwarves are able to repair items as downtime.

6. Healing

Healing removes damage.

1. Magical Healing

Magic potions or spells can provide instantaneous healing.

When magically healing a near death character, they dismember with advantage.

2. Bandage

Bandages can be used to gain some healing. Make an intelligence check. If you succeed, heal the target 1d6, plus a bonus from your wisdom. See ability scores. You may bandage yourself.

Bandaging consumes a bandage. Once you are bandaged, you can not be bandaged again until you are damaged.

7. Near Death

Characters that are near death:

- Can not move, take any actions, use spells, or use magic items.
- Die during a shift.
- Are automatically hit by all attacks.
- If they would take damage, they instead dismemberment.
- If they would be healed, they instead dismemberment. Then, if they survive, they stop being near death and heal 1. If healed by magic, they dismember with advantage.

1. Dismemberment

Roll a d12, and add constitution score. Reference the table.

Result	Dismemberment
<= 8	Dead!
9	Mostly dead: Until dully healed, you can only be healed magically.
10-14	Broken rib: -1d4 constitution
15	Broken leg: +2 AC
16	Lost arm: Can't use two-handed weapons nor shields. Loosing a third arm is fatal.
17	Lost eye: If you loose both eyes, you are blind. Loosing a third eye is fetal.
18	Concussion: -1d4 wisdom and intelligence
19	Torn muscle: -1d4 dexterity
20	Bone fracture: -1d4 strength
>=21	Miraculously Unharmd

8. Moral

Monsters, and minions might have the moral broken. They check their moral when:

- first death on their side
- leader killed
- group reduced by half.
- Last remaining is bloodied.

The dungeon master rolls 2d6. The check fails if the result is greater than their moral / loyalty score. They surrender or flee.

9. Conditions

1. Prone

Attacks against prone creatures have advantage. A creature is prone until it uses it's action to stand up.

2. Restrained

A restrained creature is incapacitated. If restrained by mundane forces, a creature can attempt to break out of it.

3. Turned

A turned creature is overcome with fear, cowering when unable to flee.

4. Incapacitated

Attacks against an incapacitated creature hit automatically. An incapacitated creature is unable to move or take other actions.

10. Exhaustion

At the end of the 9th round, and each round after, all creatures still involved in the combat take 1 damage.

11. Miscellaneous

1. Difficult Terrain

The first attempt to move out of difficult terrain fails. i.e. it takes two moves to pass through.

2. Flanking

In melee, if one side surrounds the other, the surrounded side has a +4 penalty to AC.

3. Friendly Fire

When a ranged attack misses, players make a dexterity check to void hitting an ally. Monsters and minions have a 3-in-6 chance.

4. Mapping

During combat, it's possible to reference a map, but adding to a map is impossible.

Mapping

Dungeons are complex environments where it is easy to get lost. Keeping a map is essential.

GFC's video is a perfect explanation of dungeon mapping. This page is a written guide based on their advice.

Additionally, you may wish to modify the system to better suit your needs. Any non-ambiguous agreed upon system will work.

Its recommended that one player take on the role of Mapper. See Roles.

1. Simple Method

Rather than track the exact dimensions of every room, the mapper might opt to keep a general shape of the dungeon.

The mapper draws a loose flow chart, labeling rooms and their connections.

2. White Board Method

The dungeon master has a clip board, a page protector, 1\2 or 1\4 graph paper, and a dry erase marker. They can draw out the current and near rooms. Its upto the players to copy and connect the rooms.

3. Calls

To keep an exact map, the mapper should ask the Dungeon Master for a call.

Each call should have an unambiguous meaning. The mapper and Dungeon Master should work together to establish calls that work for them.

The Dungeon Master should avoid looking at the players map, and avoid perfecting the players map.

1. Restrictions

The Dungeon Master will only provide calls when the players ask, and only after they enter a room and are able to spend time observing it.

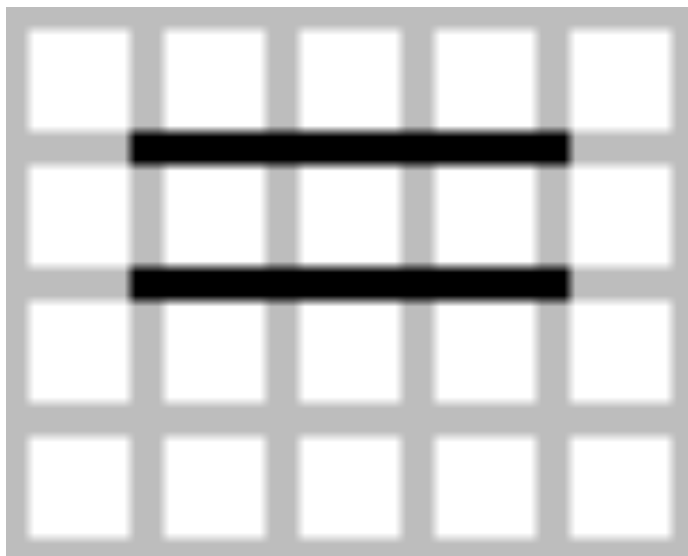

If the players loose their compass, calls will not include cardinal directions.

4. Corridor Calls

Except for hallway, each of these calls indicate exactly one square.

1. Hallway

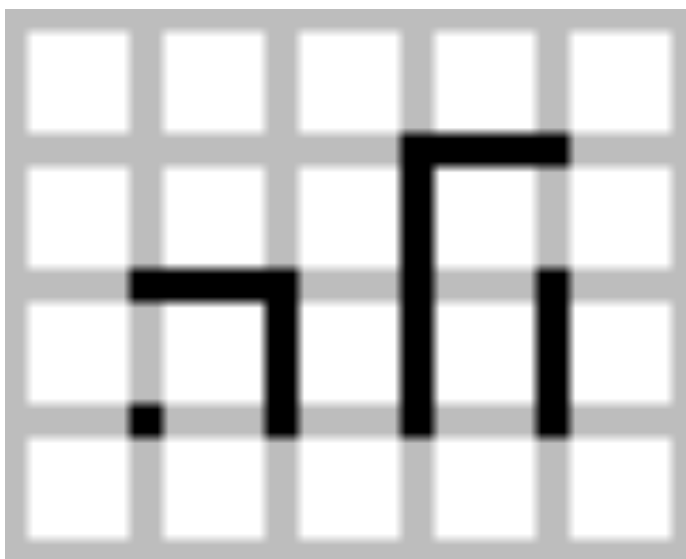

Hallway, number, direction: Indicates the corridor goes straight for a number of squares in that direction. **Draw:** Two straight lines.

Hallway 3 west.

2. Turn

turn, direction: Indicates a square where the corridor turns in the direction **Draw:** A dot + an L shape.

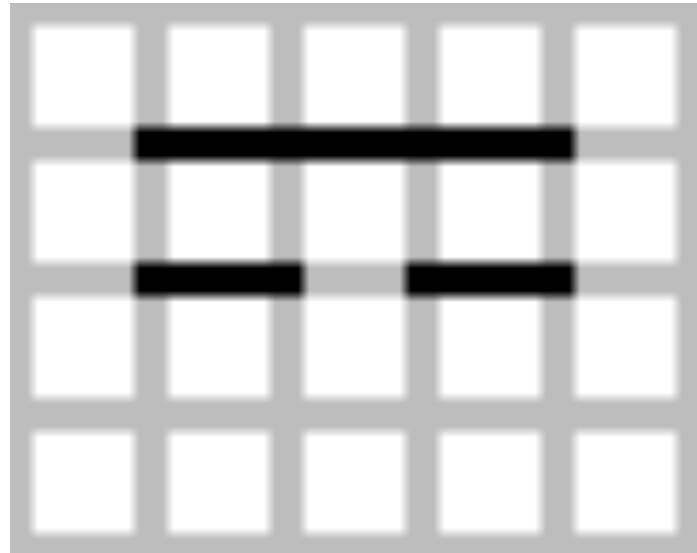

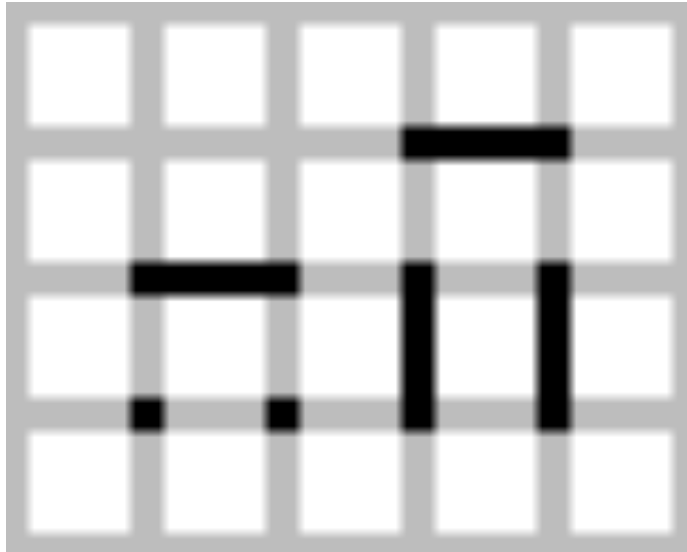

Left: turn east.

Right: Hallway 1 north. AND Turn west.

3. Split.....

Split, (directions): indicates the corridor slits left and right. **Draw:** Line + two dots.

Way 1 east. AND Branch south. AND Way 1 east.

Terminate.....

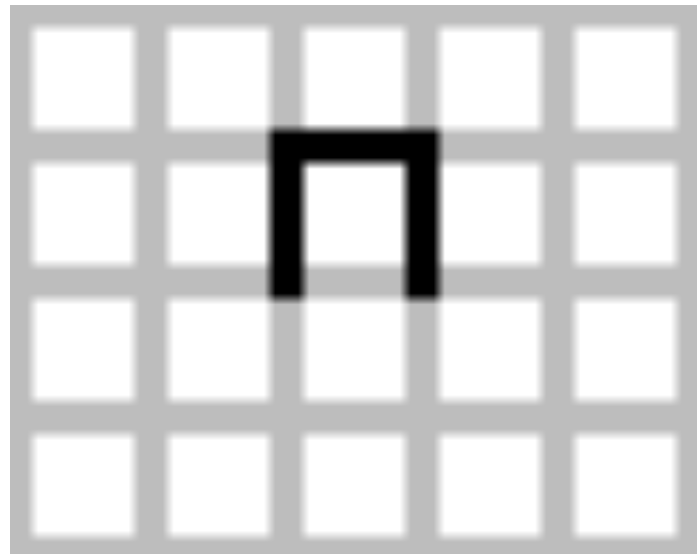

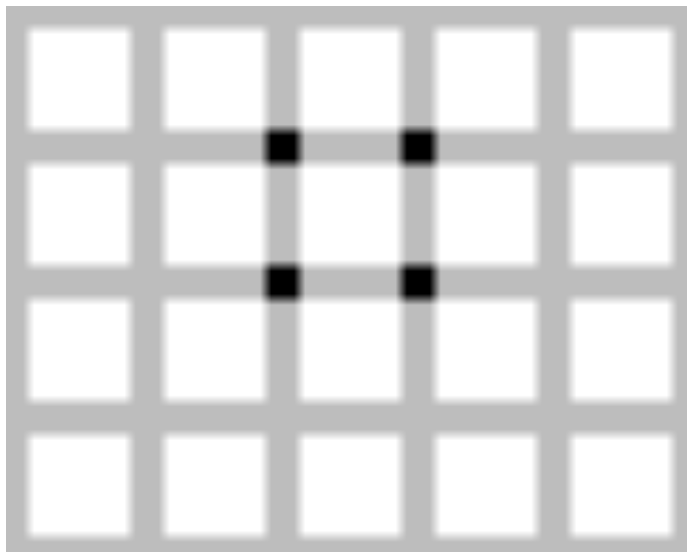

Terminate: Indicates the end of a corridor. **Draw:** Three sided U.

Left: split.

Right: hallway 1 north. AND Split.

4. Cross.....

Cross: indicates a square with four openings. **Draw:** Four dots

minate.

Large Corridors.....

Large corridors can be called in the same manner, but scaled to be twice as big, thrice as big, etc.

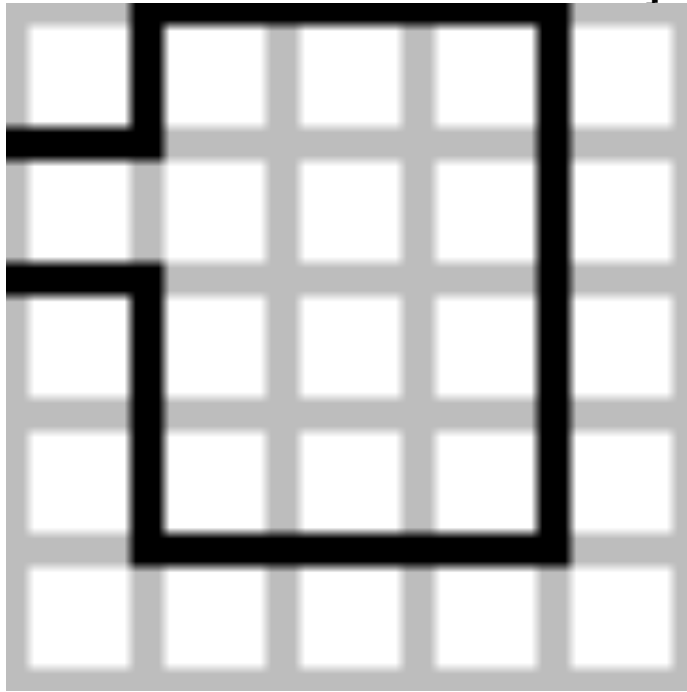

5. Room Calls

5. Branch.....

Branch, direction: Indicates the corridor has an opening on the side or direction indicated. **Draw:** Line + two dots.

1. Rectangular.....

Designate a door as the entrance. Call how far the wall extends to each side. Then describe the depth of the room.

Room: 1 north, 2 south, 3 deep.

2. Wall trace

From the entrance, going clockwise, call the direction and length of wall segment.

Large rooms

Large rooms, such as caverns, can be called by an extension of the wall trace method. A wall on each side can be traced, bit by bit.

Irregular Caverns

Irregular caverns can be called by describing the general path of the cavern and width of the cavern, similar to wall trace.

Doors / Exits

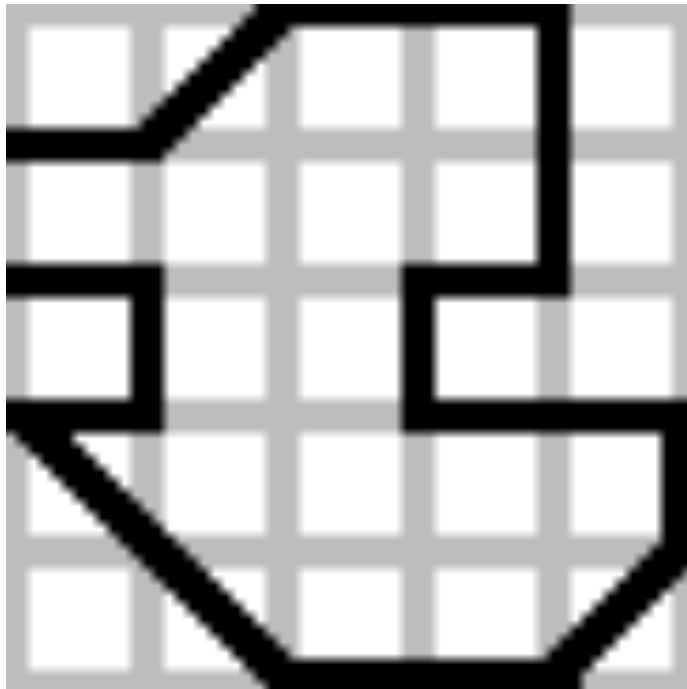

Definition

Doors are hinged panels. Exits are open passageways. Call them after calling a room or corridors.

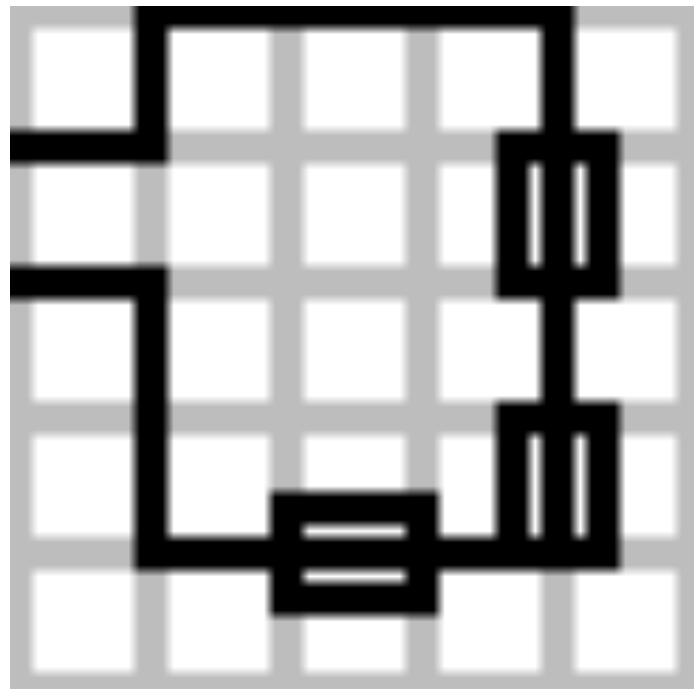

Calling

On each wall, count squares from east to west, north to south (reading direction), naming the number of the squares, and whether there is a door or an exit.

You can also call the center, or last square. **Draw:** Pictogram

Room, wall trace: north east 1, east 2, south 2, west 1, south 1, east 2, south 1, south west 1, west 2, north east 2, east 1, north 1

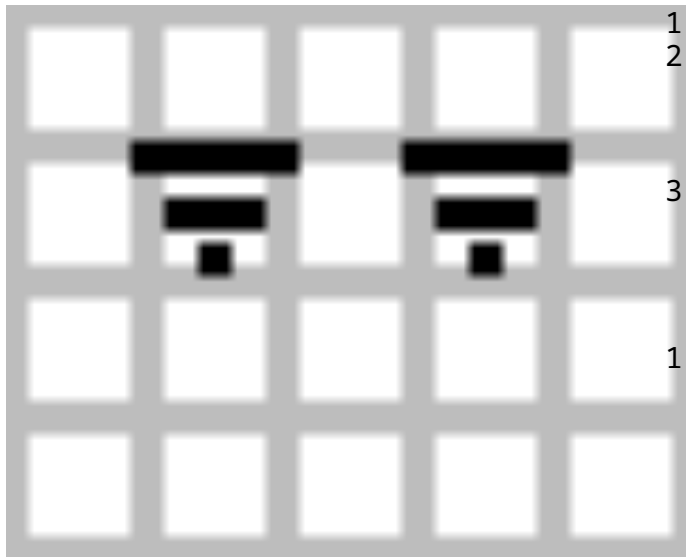

Doors: East wall 2nd & 4th squares. South wall center.

Exit, west wall 2nd square.

3. Stairs

Stairs, and a direction (up or down), indicate a square filled with stairs. The stairs extend away from the previous call. **Draw:** Pictogram.

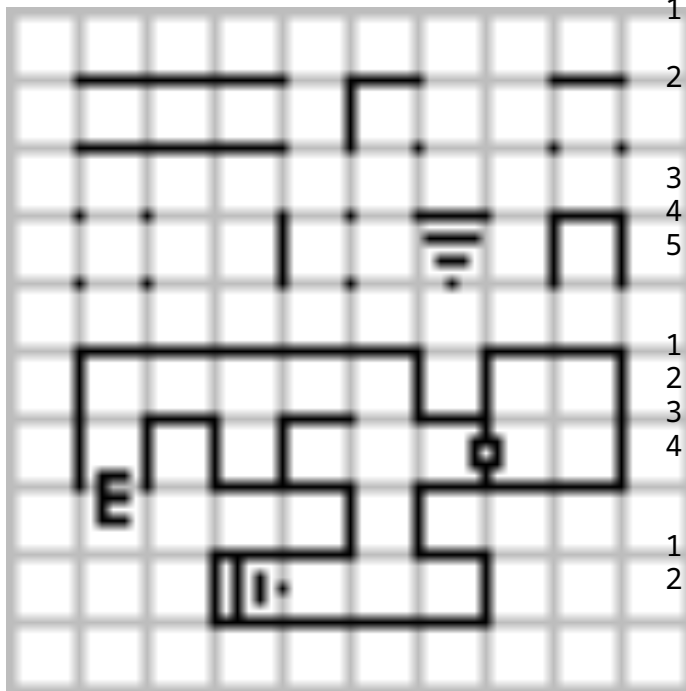

Left: Stairs going up.

Right: Stairs going down.

7. Example

This is a small example of a map and calls, starting from the entrance marked E.

1. First Hallway

1. Hallway 1 North.

2. Turn West.
3. Hallway 1 West.
4. Branch South: To the South: Terminate.
5. Hallway 1 West.

2. Cross Roads

1. Turn South.
2. Cross. To the West: Terminate. To the East: Terminate; Door on the East wall. To the South: Hallway 1 South.
3. Spit. To the East: Terminate. To the West: Hallway 1 west. Stairs down.

Beyond the Door

1. 1 North, 0 South, 2 deep.

Exercise

Follow these map calls. The calls harder as it goes on.

First Hallway

1. Mark the entrance in the bottom center of the page.
2. Hallway 2 north.
3. Turn to the east.
4. Hallway 1.
5. Split (North-South).

2. The southern chamber.

1. Terminate. There is a door on the east wall.
2. Room: 1 north, 1 south, 3 deep. There is one exit: north wall, center.
3. Hall 1 north.
4. Turn East.
5. Terminate.

To the north of the split....

1. Hallway 2 north.
2. Branch west.
3. Turn east.
4. Stairs up.

From the branch,

1. Hallway 3 East.
2. Cross. To the North: Terminate. To the West: Stairs down. To the South: Terminate; There is a door on the South wall.

5. Going Deeper

1. Room: 1 West, 0 East. 2 deep. One other door: South wall, 1.

2. Hallway 1 South.
3. Split.

To the East:

1. Turn North.
2. Turn East.
3. Turn North.
4. Hallway 1.
5. Room: 0 West, 2 East, 2 deep.

To the West:

1. Turn North.

2. Hallway 3.
3. Branch Eeast: Terminate.
4. Hallway 2.
5. Turn East.
6. Hallway 3.
7. Hallway 5.
8. Turn South.
9. Terminate.

6. Solution

.....
Ask your Dungeon Master.

Clean Up

1. Divide treasure

The quarter master totals the value of the treasure, and splits it between the players.

Money is typically split evenly, while magic items can be diced or bargained for.

2. Award Experience

The score keeper confers with the dungeon master to confirm each of the scores and their value. Then totals it and divides it by the surviving players.

See [Experience](#) for more details.

3. Experience

This chapter covers experience points (XP) and how it is awarded. XP is a measure of a PC's power and wealth, and creates progression.

At the start of the session, the Score Keeper will begin a score card: a simple piece of paper to write down scores as they happen.

At the end of the session, the Score Keeper will confer with the dungeon master to confirm each score, and establish the total amount of XP. XP is divided evenly between all players. Players who had a character die can put the XP to their next character. The Score Keeper will announce the individual amount gained.

1. Optional Rule: Prime Requisite

Each class has one or two prime requisites, which grants bonus XP for having a high ability score.

Characters with at least a 13 in one prime requisite gain 5% extra XP.

Characters with at least a 13 in both gain 15% extra XP.

Characters with at least a 16 in one prime requisite gain 15% extra XP.

2. Treasure

Recovering treasure from a dungeon scores 1 XP per 1 cp value of the treasure.

Recovering a magic item scores 1000 XP.

3. Optional: Defeated Monster

Defeating monsters scores XP based on their HD, plus a bonus for each special ability. E.g. a 2 HD monster with an ability is worth 25 XP.

HD	Base	Bonus
<1	5	1
1	10	3
2	20	5
3	35	15
4	75	50
5, 6,	300	250
7, 8,	650	550
≥9	1000	700

4. Mapping

Exactly mapping a complete dungeon level scores XP equal to 1000 times the depth of the level.

5. Session Report

Writing a session report scores 100 * Lv XP to the writer at the start of the next session.

4. Leveling Up

When a character gains enough XP to reach the next experience level:

- Looks at your class progression tables and notes any improvements in saves, AV, spells, etc.
- Roll a number of HD equal to your level. If it is greater than your current HP, that is your new HP. Otherwise, increase your HP by one.
- Increase one ability score by 1, to a maximum of 18. At 9th and 14th level, you may instead increase one ability with an 18 to a 20.
- Gain an additional downtime.

1. One Session Maximum

Characters cannot advance more than one level in one session. Leave the character 1 XP below the threshold for the next level. The remaining XP can be distributed among the other characters, as the player wishes. If all characters are 1 XP below the threshold, extra XP is wasted.

5. Abandonment

A character of 2nd level or higher can be abandoned. They permanently leave the game. Abandoned characters can leave 50% of their wealth and 80% of their XP to a new character.

6. Funerals

1. Burial

Simple burial prevents the body from being reanimated. Temples will bury and bless the dead for free. If a cleric uses one turn to perform a blessing, the soul will pass peacefully.

When a character is buried in town, a funeral can be given. For each cp spent on the funeral, that player gains 1 XP, to a maximum of 100 times the level of the character being buried. In addition, all players that attend the funeral gain XP equal to 10% of the total cp spent.

Cremation prevents reanimation and is impossible to undo.

2. Inheritance

Money and items stored in town will be subject to a 15% estate tax to local government or temple, and then inherited by the next of kin or listed heir. Further embezzlement can be done through downtime.

3. Resurrection

Returning from death is an ordeal. Until the subject gets two weeks of bed rest, they have 1 HP, move at half the normal rate, can not carry heavy items, cannot attack, cast spells, or use class skills.

Each time a character is resurrected, their constitution is reduced by 1.

7. Evaluate Loyalty

Hirelings, if any, adjust their loyalty score. For each hireling, roll a d6.

1. No Change
2. No Change
3. If they succeeded a loyalty check this session, they gain one point. 1-in-6 chance to gain one renown, to a max of 5.
4. If they failed a loyalty check this session, they loose one point.
5. If an animal or monster got to eat its favorite prey, they gain one point.
6. If a hireling died that session, non-monster hirelings loose one point. 1-in-6 chance to loose one renown.

Checks and Saves

1. Abilities

There are six abilities: strength, dexterity, constitution, intelligence, wisdom, and charisma. They're rated from 3, the worst, to 18, the best.

1. Checking

You succeed if $d20 \leq$ the ability score. (low roll good)

2. Saves

All characters and monsters can make saves to avoid the full effects of certain traps, spells, and attacks. There are two kinds, physical, and magical. Your class's progression table determines your save values.

You succeed if $d20 \leq$ save value. (low roll good)

Success against an effect that causes damage means that the damage is halved. Otherwise, the effect has been entirely avoided or negated.

3. Advantage and Disadvantage

1. Advantage

When making a roll with advantage, roll an additional time for each advantage. Take the best roll.

2. Disadvantage

When making a roll with disadvantage, roll twice and take the worse.

3. Combination.

One disadvantage and one advantage cancel out.

4. Loyalty Check

Roll 2d6. The check succeeds if the result is equal to or less than the loyalty. (low roll good)

4. Optional: Heroism

Push yourself. Reduce your constitution score by one. Choose one:

- Gain advantage on one check.
- Take an action despite being near death with disadvantage.

Minigames

1. Challenge

1. Objective

At the start of a challenge, the dungeon master will announce the number of successes needed to complete the challenge, as well as the number of failures to fail the challenge.

2. Procedure

1. Players make action to confront the challenge, and how they will support each other.
2. Dungeon master will say which ability to use, and if it is risky.
3. The player makes the check, with advantage for each supporter.

3. Risky

Risky checks start with two disadvantages, and results in either two failures or two successes.

2. Negotiation

1. When to Negotiate

Negotiation does not change an NPC's character. Instead, players convince an NPC that a certain course of action, is actually in character.

- Plausible request. Players need to write this down.
- NPC has reason not to immediately support the players.
- NPC wants to negotiate.

2. Statistics

The NPC has four stats: interest, patience, motivation, and pitfall.

Interest ranges from 0 to 5. If interest reaches 5, the NPC makes an offer. If interest reaches 0, the NPC ends the negotiation without an offer.

Patience ranges from 0 to 5, and can only be reduced. When patience reaches 0, the NPC makes a final offer.

The dungeon master uses this table to determine the starting stats.

Attitude	Interest	Patience
Hostile	1	2
Neutral	2	3
Friendly	3	4

When an argument appeals to a motivation without mentioning a pitfall, the result gets better. When it appeals to a pitfall, it gets worse.

Each NPC will have about three motivations and about two pitfalls.

1. Benevolence
2. Discovery
3. Freedom
4. Greed
5. Higher Authority
6. Justice
7. Legacy
8. Peace
9. Power
10. Protection
11. Revelry
12. Vengeance

3. Discovering Motivation (and Pitfalls)

A player can attempt a wisdom or intelligence check to check a particular motivation. If they succeed, the dungeon master will confirm whether it is a motivation, pitfall, or neither. However, if they fail, reduce patience by one. Once the players make this check, they can not do so again until they make an argument.

An NPC with interest 3 or more may hint at their motivations if asked.

Outside of negotiation can interrogate close friends, or otherwise preform recognisance.

4. Arguments

Players must make a full argument the NPC; that is, what the NPC should do, and why.

The dungeon master will determine if this appealed to any motivations or pitfalls.

If it appeals to a pitfall, the NPC loses one patience AND one interest.

Otherwise, one player will make a wisdom or charisma check. Compare the result on the table.

-	Motivation	Normal
Success	+1 interest.	+1 interest, -1 patience.
Failure	+1 interest, -1 patience.	-1 patience

If the argument contains a lie, and it fails to increase interest, the NPC catches it and is offended, losing an additional patience.

5. Offers.....

After making an argument the NPC makes an offer based on their interest.

Interest	Offer
0	No, and...
1	No.
2	No, but...
3	Yes, but...
4	Yes.
5	Yes, and...

Keep Going?

If the NPC has remaining patience, and their interest is between 1 and 4, the players can choose to continue the negotiation, or accept the offer as is.

Player Roles

Using roles makes play smoother and easier for the dungeon master.

In addition to potentially being a score for the party, taking on a role during town scores 50 XP.

Its possible to have multiple of most roles. For example, there can be a caller for exploration and a caller for combat, or two mappers that check each other's work.

1. Mapper

Keep track of the layout of the dungeon. If you'd like, ask the Dungeon Master for exact map calls. See mapping.

2. Caller

Get consensus on what the party would like to do, and communicate to the Dungeon Master.

3. Chair

Make sure that all the roles are filled.

4. Score Keeper

Keep track of scores, such as looted treasure, and defeated monsters. See experience.

5. Scribe

Keep track of the different monsters and traps, their behaviors, mechanics, and even their combat statistics (depending on the Dungeon Master's approach to metagaming).

6. Quarter Master

Keep track of torches, bandages, and other equipment. Keep track of loot as it collected.

Appendix A - Additional Notes

1. Modification

The book is meant to act as a standard reference for how the Dungeon Master makes rulings. While the Dungeon Master's call is ultimately final, its recommended to stick to the book, and later change unsatisfactory rules. Yabec is open source, and available on Github.

If players don't like the rules, they should begin a conversation about how they would like the rule, and the kind of game they are interested in playing. When an agreement is made, it should be reflected in the book. If they have other games they are interested in playing, they should also bring those to the conversation. /gen

The book also acts as a suggest stock of rulings. If the Dungeon Master should be able to appeal to the book, and get a simple but opinionated rule. The new rule should not disrupt the flow of play, but rather maintain it. If the rule turns unfun, it should be ammended via the above process.

2. Metagaming Comment

I have a lax approach to metagaming. Any info gained during the session is valid, including;

- Info from dead characters.
- Deduced AC and Hit Dice.

What would be metagaming would be searching the internet for answers, or reading the adventure source books.

This comment is meant to give the superflous mechanical permission to do this.

3. Appendix B - The West Marches

Life in the walled city is safe. Beyond its barrier is the WEST MARCHES, where monsters roam and acient treasure lay.

West marches is a style of play. There is an open fantasy world, maintained by one or more dungeon masters. Players organize freely into adventuring parties, exploring where they may. At least three players are needed to run, but ideally four to six. Dungeon mastes may be prepared to run for as many as a dozen players. Players should be enterprising, conspiring to meet and secure valuable treasure, sharing bits of lore and secrets with eachother.

Change Log

What's changed since the last version of Yabec? The current print version is 3.1! Which is changed notably from version 2.8 which has been at the table the last few weeks. Get involved with Yabec development on [Github](#)!

- Minions overhauled again! See below.
- Saves are roll under, and there are now only two. Update your character sheet.
- Spell descriptions continue to be updated
- Travel rules overhauled to allow for camping
- Tweaks to: weapon stats, combat rules.
- Reorganized the pages and formatting, and added additional links and navbars to the website. It should be easier to navigate.

Rulings I'm going back on:

- Resting while not fatigued prevents the next fatigue. This is a reasonable action with analogues in clock hazard games.

- Resting while not fatigued can extend spells, but only when done before casting. This rewards player planning, and spells which would become op can end on a shift instead of fatigue. For the exact rule see [both the hazard and resting sections](#)

1. Minions

Minions are replaced by hirelings. There will be less paperwork, and better balance.

- The maximum number of hirelings is now called "renown". Its still determined by your charisma score like before, and the value hasn't changed.
- Animals still count against your renown.
- All human/demihuman hirelings go out adventuring on their own. (they return any equipment).
- If you like, pick one human minion to hold on to. They become a "henchmen". This a special type of retainer that acts as your sidekick. Reduce their XP by half.
- Many basic types of hireling can be found on the [items list](#). They are specialized for different tasks. The lackey can carry many items, the man-at-arms comes ready to fight, and the supplier will restock common adventuring equipment.
- See [hirelings](#) for more info.
